EXAMINER'S AMENDMENT

An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it MUST be submitted no later than the payment of the issue fee.

Authorization for this examiner's amendment was given in a telephone interview with Yoon S. Ham on Monday, July 24, 2006.

1. The application has been amended as follows:

On Page 5, in line 31, delete "he planetary gear" and insert --the planetary gear--

Claim 2 is canceled.

In claim 1, on line 4, delete "a seat provided on the top of the rotary post;" and insert --a seat, adapted for a user to sit upon, provided on a top portion of the rotary post;--

In claim 1, on lines 7-8, delete "to turn in an opposite direction with each other" and insert --to turn in opposite directions relative to each other--

In claim 1, on lines 8-9, delete "and the handle is subjected to forcible rotation." and insert --or the handle is subjected to a rotational force, wherein the reverse rotator is provided with a sun gear affixed to the rotary post, a plurality of planetary gears rotatably mounted to the base in meshing engagement with the sun gear; and a ring gear fixedly secured to the handle in meshing engagement with the planetary gears.--

In claim 3, on line 2, delete "the user sat on" and insert --a user sitting on--

In claim 4, on line3, delete "the ankle of the user." And insert --a user's ankles.—

REASONS FOR ALLOWANCE

2. The following is an examiner's statement of reasons for allowance:

In view of the amendments and after further consideration of the invention, the claims as presented avoid the prior art of record. The prior art does not disclose a twisting exercise device having a rotatable post, a seat provided on top of the post for a user to sit upon, a handle operatively coupled to the post and a reverse rotating mechanism that causes the seat to rotate in one direction and the handle bars to rotate in the opposite direction when either the handle bars or the seat is subjected to a rotational force. In particular, the reverse rotating mechanism comprises a sun gear affixed to the rotary post, planetary gears affixed to the base in meshed engagement with the sun gear, and a ring gear fixedly secured to the handle in meshed engagement with the planetary gears such that the handle rotates about the rotary post while the seat rotate with the post in an opposite direction to the handle rotation direction.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

Conclusion

3. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.
